

# EVELYN BART

[evelyn.m.bart@gmail.com](mailto:evelyn.m.bart@gmail.com) | [Portfolio](#) | [Github](#) | [LinkedIn](#)

I build apps with a strong bias toward reliability and accessibility. I enjoy debugging tricky edge cases and learning how the behind the scenes of products. Most of my skills come from hands-on project work and constant iteration.

## TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, HTML, CSS, SQL
- **Frontend:** React, Next.js, responsive UI development
- **Backend && DB:** Postgres, Node.js, Express, REST APIs
- **Workflow:** Code reviews, documentation, issue reproduction
- **Concepts:** data modeling, debugging, system reasoning
- **Tools:** Git, GitHub, deployment workflows, Vercel, LLMs, Cursor Agent, Claude
- **Infrastructure:** Linux command line basics, CI workflows, cloud deployment exposure, build tooling/package management

## EXPERIENCE

### Independent Software Development

July 2024 – Present

- Designed application flows that connected frontend interfaces with backend services and databases
- Interpreted system behavior and usage patterns to guide improvements
- Worked with structured API data, transforming and validating datasets before rendering
- Analyzed application data flows to improve reliability and performance

### Baker – Benchwarmer's Bagels

Dec 2023 – July 2024

- Delivered consistent, high-quality production in a fast-paced environment requiring precision and time management
- Cross-trained with front-of-house staff to support customer operations when needed
- Demonstrated reliability and attention to detail under tight daily deadlines

### Food Service Worker II – UVMHC

Aug 2021 – June 2023

- Collaborated with a large team to deliver reliable service in a high-pressure hospital environment
- Learned and performed 8+ operational roles to support team flexibility

## PROJECTS (selected)

Check out my [Portfolio](#) to see more!

### [Mappi](#) – Neighborhood Search Tool

- Processed and interpreted external geospatial API data to support user decision-making
- Designed failure-safe API workflows & defensive error handling for unstable network conditions

Stack: React, TypeScript, API integration, Styled Components

### [Griddle](#) – Daily Art Challenge App

- Developed reusable UI components to support rapid feature expansion
- Implemented authentication workflows and secure API communication
- Improved feed performance and reliability of daily challenge resets

Stack: React, TypeScript, Postgres, Styled Components

### [MarkIt](#) – Bookmark Hub

- Translated Figma designs into accessible, production-ready interfaces
- Structured components for maintainability and lazy loading performance
- Focused on clean UI architecture and documentation

Stack: React, TypeScript, Tailwind CSS

### [Pup Progress](#) – Dog Training App

- Built structured training flows with progress tracking and flexible user paths
- Implemented hooks and context-based state management

Stack: React, TypeScript, semantic HTML

### [EB Blog](#) – My Dev Blog

- Built and deployed a personal developer blog with database integration documenting projects and technical decisions
- Designed database-backed features and worked directly with stored data structures
- Maintaining consistent technical writing to reflect on projects, portfolio updates, and iterative improvement

Stack: React, TypeScript, Postgres

## EDUCATION

University of Vermont – BA, Theatre & Computer Science | 2019 – 2023
